
(a) controlled output (predators), controller on at t=1500
Kp = 0.0
Kp = 0.05
Kp = 0.2
Kp = 1.0
predators
(b) uncontrolled state (prey)
prey
tick
(c) oscillation suppression
CV after switch-on (2nd half)
predator CV, target 400
prey CV, target 400
predator CV, target 600
prey CV, target 600
feedback gain Kp
(d) control effort (harvest)
predator yield / tick
target 400
target 600
feedback gain Kp
